

# Promotional Graphics...

After over 30 years experience in the signwriting of curtainsider products for the commercial vehicle industry, continuous investment in training and new technologies has led to the development of Promotional Graphics, an entirely individual area of expertise for Structure-flex.

Combining the professional skills and experience of fully trained sign writers with the utilisation of modern technology and application methods, Structure-flex Promotional Graphics can design and produce a broad range of products to provide maximum visual effect.

Besides being specialists in the application of vehicle livery and decals, Structure-flex Promotional Graphics also produces shop front signs for the high street, safety signs for the workplace, banners for regional events and promotional offers and sponsorship boards for sports fields and football grounds, together with many other signs and graphics applications.

Structure-flex Promotional Graphics is also able to offer wide format digital printing, producing a range of images from full scale 40ft trailer curtainsider digital print graphics to self adhesive stickers and decals.

This division has also recently added exhibition and event inflatables to its portfolio. Combining the CAD design and HF welding skills of Structure-flex Special Projects with high impact visuals, enables inflatable signs, billboards, product replicas and other inflatable advertising media to be created to maximise the promotion of any business.

## Signage

Many local businesses have benefitted from Promotional Graphics designs nation-wide.

## Exhibition

Structure-flex uses both its design and welding capabilities to produce spectacular, 2 and 3 dimensional promotional material.

## Vehicle Graphics

Structure-flex Promotional Graphics' vehicle and curtain graphics are seen nation-wide.
