

# Lifting & Safety Systems...

Structure-flex is able to supply a broad customer base with a comprehensive range of products from manufacturing facilities in the UK, Europe and the Far East. Backed by a flexible supply chain and local manufacturing facilities, the company can provide bespoke products on a short lead time basis.

To supplement its original range of lifting products, manufactured in the UK, Structure-flex has established key strategic relationships with a number of lifting equipment manufacturers to service the UK market. With standard stock products including duplex, simplex, round slings and lashing systems being sourced competitively from the Far East, Structure-flex adds a high quality harness range and bespoke UK manufacture for specialist items and assemblies. In addition to this, it has the capability to produce round slings up to 100 Tonnes, 36 metres circumference. Structure-flex is also able to print your company name onto your sling label to further promote your business.

The offer now available to the UK transport, construction and DIY markets combines the provision of local manufacturing, product knowledge and sales advice from Structure-flex Lifting & Safety Systems. The company guarantees:

- **Product quality across a comprehensive range**
- **Customer support and advice in textile lifting and securing systems**
- **A flexible supply chain service and response time**
- **Tailor-made slings to meet specific needs**
- **Continuous product development**

The full stock range of slings, lashing and harness products, is increasingly available to purchase online, available at 24/48 hours for the UK market.

## Proof Testing Equipment

Used extensively in the marine offshore, property and lifting sectors, Structure-flex's proof testing equipment has found a niche in the international oil, gas and mineral exploration industries. An agreement with Newfoundland rigging experts Extreme East, has meant that Structure-flex is becoming a global supplier of durable, high quality proof testing bags to the Canadian and North American market.

Proof testing bags provide a test load using water instead of traditional solid weights for all forms of testing. This is a highly reliable, efficient and practical method of load testing all types of equipment as part of a certification process.

## Slings

Structure-flex flat and round slings and safety harnesses are typically used in the aerospace, construction, materials handling, lifting and process and manufacturing industries. All types, including their accessories, are manufactured to the highest standards for ultimate safety.
